New Energy Husum 2012: “All renewables at a glance”

“All renewables at a glance” is the motto in Husum from 15–18 March 2012 when the 8th New Energy trade fair will once again be presenting everything to do with renewables: solar power and heating, small wind turbines, bio and geothermal energy, electromobility, heat pumps, combined heat and power plants, wood chip and pellet heating, and advice on energy efficiency.

300 exhibitors from 15 nations will be showcasing their innovations, products and services in four large exhibition halls and an attractive open-air exhibition space. An estimated 18,000 visitors from 45 nations are expected.

Small wind turbines and electric vehicles: Focus on energy topics of the future

Electric vehicles and small wind turbines are future topics for the renewables sector. New Energy Husum 2012 will emphasise its increased role as the leading trade fair and global market place for the small wind turbine industry and, with a large number of exhibitors from the sector and an international symposium, will once again play host to the international small wind turbine industry.

Renewable energy will also play a decisive role in transport of the future, which is why New Energy Husum 2012 will be showcasing the latest technical developments in the area of electrically powered transportation at exhibition stands, in lectures and presentations.

Congress with high-calibre information about everything to do with renewables

Since 2010 the NordseeCongressCentrum (NCC) at the exhibition grounds has offered the best possible space for New Energy's concurrent congress. As an enhancement to the exhibition, individual lectures and comprehensive information programmes provide an extensive peripheral programme that covers all aspects of renewable energy.

Cooperation with expert partners and institutions and associations from the fields of politics, industry and science guarantee a large variety of topics and a broad view of national and international developments in the renewables sector. The high-calibre congress programme will be enhanced by symposia and discussions on current energy topics.

New Energy Husum 2012: Facts and figures at a glance

**The International
Renewable Energy Trade Fair
15–18 March 2012 · Husum**

- 300 exhibitors
- 18,000 visitors from over 45 nations
- 4 exhibition halls | 4 congress rooms
- Large, attractive open-air exhibition space
- Over 16,000 sq m exhibition space
- Extensive congress programme in the NordseeCongressCentrum at the exhibition site
